

Product Code . EL-EELE-11244

Power Electronics Training System

Description

Power Electronics Training System

The Power Electronics Training System consists of 28 experimental modules, a three-phase squirrel cage motor, load, control and measuring devices. It includes single-phase rectifiers, three-phase rectifiers, DC choppers, inverters and application experiments. It has wide the applications of solid-state electronics to the control and conversion of electric power. Popular circuits of power electronics contain rectifiers, choppers and inverters. This is the combination of power, electronics, and control. The experimental for modules includes converter, power supply, load, control and testing modules. These experimental modules and instruments will be introduced and demonstrated in the subsequent experiments.

We are leading manufacturers, suppliers of Power Electronics Training System Electronics Engineering Lab Equipments. Contact us to get high quality Power Electronics Training System for Electronics Engineering Lab Equipments for schools, colleges, universities, research labs, laboratories and various industries.
