

Product Code . EL-PCT-11577

Process Control Simulator Unit

Description

Process Control Simulator Unit

The water finally flows back into the sump tank T1, the heat introduced into the system being removed by a water cooler, HE1. V2 simulates a vessel used for a hazardous process reaction, demanding the use of flame proof control equipment in its immediate vicinity, thus providing a logical reason for the use of pneumatic and interfaced control equipment. Water is fed to a centrifugal pump from sump tank T1 and then to a water heater HE2 before passing into two vessels V1 and V2, mounted in series and simulating a reactor system. The process which forms the basis of operation of the various control loops and equipment is illustrated in. Four standard areas of control are presented.

We are leading manufacturers, suppliers of Process Control Simulator Unit for Process Control (PLC) Trainer. Contact us to get high quality Process Control Simulator Unit for Process Control (PLC) Trainer for schools, colleges, universities, research labs, laboratories and various industries.
